Ship Chartering & Operations The Full Commercial Lifecycle In One Solution

From the time you do your initial voyage estimate through to complete financial closure of the voyage it is imperative you capture and understand all events, costs and income whilst managing the ongoing ship and cargo operations. Whilst the system maintains the full gambit of commercial management each user will only see a view tailored to their specific functionality and processes:

- voyage estimates and fixture capture (charter in, charter out, time charter, etc), benchmarking and optimisation
- ship and cargo operations including document generation and management, message management, etc. Ship and port vetting/clearance. Emissions reporting
- port agency (appointments, disbursements, events) and bunker procurement
- performance monitoring: physical ship performance and voyage profitability (i.e. constant monitor of actual versus estimate), time charter performance
- demurrage and other claims

HubSE can provide you with a solid solution based on our in-depth experience and knowledge of building such systems over the last 30 years.

The Solution:

1. enterprise strength solution tuned for deployment in your office locations around the globe
2. an “open” system where purpose built interfaces can be applied to link seamlessly into your other systems if required
3. provides full access to your data for extended reporting and analysis
4. dashboard-driven features to ensure all relevant processes are known and completed in a timely manner
5. links to our ‘document exchange portal’ to support system-to-system links with your partners e.g. hub agents, bunker brokers, etc
