Time Charter Ship Performance Bunker & Time Metrics A Straightforward Solution

How well are your time chartered ships performing for you? Understanding ship performance against guarantees is critical to commercial success:

- automatically assess ship performance against guarantees
- includes both bunker over-consumption and lost time calculations according to weather clauses in force
- provides essential back-up to claims and,
- most importantly, a confidence you are on-top of individual ship performance at all times
- up-to-date knowledge guarantees a powerful stance when negotiating new contracts, option extensions, etc

HubSE can provide you with a straightforward solution to record and report comprehensive ship performance statistics quickly and easily.

The Solution:

1. light, easy-to-use shipboard element where the initial crucial consumption data is recorded
2. simple method of posting the data back to our exchange service where it is checked and validated before being accepted into our calculation and reporting service
3. straightforward office based maintenance of ship guarantee specifics
4. comprehensive performance reporting tool with ship performance, class performance, and claim backup output
